

User Manual

**■Water Resistance**

- The watch is water resistant to 3 atmosphere or 5atmosphere depending on model. It means that it is a certain level of resistance to a shower, drops of water when washing face and sweat under daily life. You can not use Knot watch under water.
- Please make sure that crown is pushed back correctly before use to prevent water entering watch case.
- Please don't turn or pull out crown while your watch is submerged in water or wet to prevent water from entering watch case.
- Repair for water damage caused by improper handling is not covered by Knot warranty.

**■Lunar Inequality**

When you wear Knot watch when temperature is from 5°C to 35°C, average Lunar inequality is ±20seconds

**■Storage**

- Please keep away from static electricity and from objects to magnetize such as electric appliance, PC, AV equipment and mobile phone. The exposure of watch to strong magnetic field may cause the spare parts to be magnetized/lost to breakdown.
- Please note that removing the magnetism is not covered by Knot warranty.

The exposure of watch to strong magnetic field may cause the spare parts to be magnetized/lost to breakdown.

- Please note that removing the magnetism is not covered by Knot warranty.
- Please keep away from environment under -5°C or over 35°C. Exposure to the environment may cause watch function to drop or to stop.
- Please keep away from strong vibration.
- Please keep away from excessively dusty place.
- Please keep away from unusual environment such as hot spring and drawer with insecticide.
- Exposure to direct sunlight or strong light for a long time may cause color of dial to change. Please note that changing color of dial is not covered by Knot warranty.
- Please keep away from chemicals and chemical vapor.

**■Other Precautions**

**[Daily Care]**

- Watch case and strap are attached to skin directly like clothes. Leaving watch dirty may cause rust and it may make sleeve dirty or cause a rash. Please keep watch clean.
- It extends long life of Case, Strap and Gasket to wipe with soft cloth when you take off watch.

**[Glass]**

Strong shock may cause watch case to deform and glass to break. Please keep away from strong shock.

**[Metal Strap]**

Please clean up metal strap such as partially washing with soap and water. You may want to use a soft toothbrush. Please be sure to cover watch case during this process so as not to soak it.

**[Leather Strap]**

All leather straps are crafted of natural leather. So straps may have "wrinkle" or "scrim". Please note that these are texture of natural products, not scratches.

**[IP (Ion Plating)]**

Please note that IP may change the color depending on your usages or storing conditions(Excessive sunlight or UV light, humid place, chemicals, etc.)

**■Rash and Allergy**

- If you easily get rash, you may have itch or rash. The cause of rash is considered below.
- Allergy to metal or leather.
- Rust, Dirt, Sweat, etc. on watch main body and strap.
- In event skin has signs of rash or itch, please stop immediate use and consult a doctor.

**■Other precautions while wearing**

- Please be careful below.
- When you put on and take off strap, your nail may get scratches by clasp etc.
- When you fall off or hit somebody, you might get injured by wearing watch.
- Especially when you hold infants, please keep them away from watch so as not to get injured or get rash by allergy.

**■Battery Information**

**[First battery]**

Battery inside Knot watch when you purchased is a sample to check watch function and performance. The sample battery may run out for short time after your purchase.

□Please note that sample battery is not covered by Knot warranty.

**[Battery Exchange]**

□Please take or send your watch to the store where you purchased Knot watch to change the battery. Please note that damage by the battery change or repair at unauthorized stores is not covered by Knot warranty.

□If you leave run-out battery inside watch for a long time, the battery may leak and the watch may break down. Please change the battery as soon as possible. □We check all internal inspection even when you request us to change battery because the malfunction may be caused by the others except battery exhaustion. We do internal inspection, operation inspection after the repair, and water-resistant inspection. So normally it may take about 2weeks after we receive your request for repair.

[Except Year-end and New Year holidays, QW/Summer holidays, etc.]

**[Warning]**

- Please do not take out battery from watch. If you did, please keep battery out of reach of children. In event battery is swallowed immediately consult a doctor.
- Please never make battery short, take to pieces, heat or burn as it may explode, generate heat, and catch fire.
- Battery used for Knot watch is not rechargeable. Please never recharge. If you recharge/battery may leak and be damaged.

**Using Your Knot Watch**

**[SMALL SECOND]**

**Setting the Time**

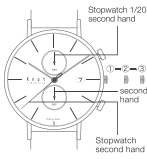

Pull out the crown to the <2> position and turn to set the hour and minute, Push the crown back to the original position to complete the setting process and return the watch to timekeeping mode.

**[CHOROGRAPH+]**

**Setting the Time**

Pull out the crown to the <3> position and turn to set the hour and minute, Push the crown back to the original position to complete the setting process and return the watch to timekeeping mode.

**[CHOROGRAPH+]**

**Setting the Date**

Pull out the crown to the <2> position and turn it clockwise to set the date. Push the crown back to the original position to complete the process. □Please avoid setting the date between 9 p.m. and 2 a.m., as the date change mechanism activates during these hours.

**Setting the Time**

Pull out the crown to the <2> position and turn to set the hour and minute, Push the crown back to the original position to complete the setting process and return the watch to timekeeping mode.

**Zeroring the Minute and Second Hands**

- Pull out the crown to the <3> position.
- Press and hold Button A for two seconds to place the minute hand in the adjust mode. The minute hand will make one rotation to the 12 o'clock position.
- Press Button B repeatedly until the pointer is in the <0> position.
- Press and hold Button A for two seconds to place the second hand in the adjust mode, after completing one rotation.
- Press Button B repeatedly until the pointer is in the <0> position.
- Complete the process by returning the crown to its original <1> position.

**■Straps**

**[Two-piece Type]**

Watch straps attach with easy lever-operated spring bar pins, as illustrated below. The shorter piece of the band attaches to the 12 o'clock end of the watch and the longer piece to the 6 o'clock end. To attach, turn the watch and band over, and insert the end of the pin opposite the lever <1> through the band and into the watch body bracket.

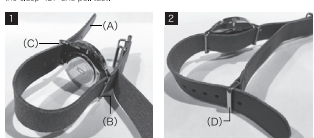

**Easy Lever**

Then, using your fingernail, slide the lever to insert that end of the pin <2> into the bracket. Please ensure that the pins are seated correctly into the holes on both sides, and be careful not to scratch the watch body during installation.

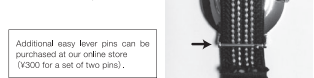

**[Full-though Type]**

First, use the easy levers to attach the two spring bar pins to the watch body. Illustration I Pass the tip of the strap <A> down between the pin and body on the 12 o'clock end of the case <B> and across the back of the watch. Illustration II Then pass it back between the pin and body on the 6 o'clock end <C>, through the strap <D> and pull-taut.

**Tochigi Mesh Strap Kumihimo Strap**

Place the band against the back of the watch, then use the easy levers to install both of the pins and attach the band to the watch body.

Additional easy lever pins can be purchased at our online store (¥300 for a set of two pins).

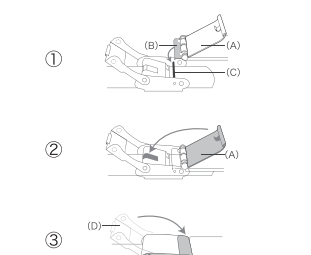

**Adjusting the Size of the Mesh Strap**

Open the clasp, insert a small flathead screwdriver or similar tool into the inner slot, and lift to release the locking clip from the strap, as shown in Illustration 1. Then grasp the clasp with your fingers and slide along the strap (Illustration 2) to your preferred position, keeping the indentation on the back of the clasp aligned with one of the grooves in the back side of the mesh. Use the leverage of the screwdriver to reduce the clip and lock the clasp into place (Illustration 3). □Be careful not to damage the clip by using too much force or aligning it in such a way that it is not firmly seated in a groove in the mesh.

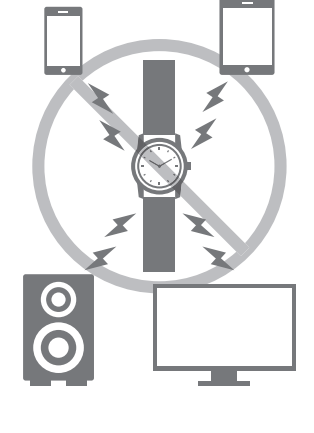

**Using the Mesh Strap Clasp**

- Holding the band from the 12 o'clock and bracket <A>, catch the hooks <B> on the metal bar <C> inside of the clasp. □Note: If <B> and <C> are not connected securely, the watch could fall off and become damaged.
- Cover the metal piece <A> hooked on the bar to fix it in place by closing the cover plate.
- Then flip the safety clip <D> closed from the other side to complete the attachment process.

**Magnetism**

Because the ultra compact step motors in quartz watches use magnets, the watch could be affected by magnetic interference from cell phones, PCs, TVs, audio equipment, speakers, automatic marjoring tables or other home appliances. This could cause it to temporarily stop, or the time to delay or advance, and you require comprehensive inspection or internal adjustment, including demagnetizing, which may not be covered by warranty.

**About Knot original box**

Since the watch and strap are stored at the time of purchase, the Knot original box is a box to be used when sending repaired items, so please keep it in a safe place. Knot We can not guarantee against breakage, insecticide etc. occurred when sending by other than the original box. Please note.

**Today's Watch on Today's Clothes**
